Om Lahore

Full-Stack Engineer

Mumbai, India | +91 91568 02668 | omlahorey@gmail.com | github.com/omlahore | linkedin.com/in/om-lahorey

Open to on-site or hybrid roles in Pune, Mumbai and Bengaluru, and remote.

Technical Skills

Languages: TypeScript, JavaScript, Go, Swift, Python, SQL, Java, C, C++
Frontend: React (React.js), Next.js, Redux, Tailwind CSS, HTML, CSS, Three.js, WebGL
Backend: Node.js, Express, REST application programming interfaces (APIs), GraphQL, Prisma, authentication and authorisation, secrets management
Databases: PostgreSQL, MongoDB, Redis, Supabase, pgvector
Infrastructure: Amazon Web Services (AWS), Docker, Kubernetes, GitHub Actions, DevOps, Continuous Integration and Continuous Deployment (CI/CD), Prometheus, Grafana, Linux
Practices: Role-Based Access Control (RBAC), Identity and Access Management (IAM), TLS and certificate management, incident response, unit and integration testing (Jest, Go test), Git, code review

Experience

Founding Engineer June 2026 - Present
Ensueno *Mumbai, India*

- Build retrieval-augmented AI features for a BFSI education platform, including a voice interface, on PostgreSQL with the pgvector extension.
- Own features end to end as the founding engineer, across all 3 layers: the React front end, the Node.js application programming interface (API), and the PostgreSQL schema and deploy.

Web Developer April 2024 - June 2026
Marketing Mojito *Remote*

- Delivered 20 or more client sites in JavaScript and React, and cut median page load time by roughly 20 percent.
- Owned Amazon Web Services (AWS) infrastructure across 20 or more client properties: Simple Storage Service (S3) hosting, Domain Name System (DNS) records, Transport Layer Security (TLS) certificates, and per-client least-privilege Identity and Access Management (IAM) policies.
- Built Docker-based Continuous Integration and Continuous Deployment (CI/CD) pipelines on GitHub Actions for 20 or more properties, and set up Prometheus and Grafana alerting on central processing unit (CPU), memory and error rates.
- First responder for production incidents including site compromises: contained and recovered the affected sites, ran the root-cause forensics, and wrote the postmortems.

Projects

RemoveMacAI | *Swift, SwiftUI, Objective-C, macOS*

- Built an open-source macOS debloater, a native SwiftUI app plus a command-line tool, that turns off Apple Intelligence, deletes its on-device models through Apple's asset service over XPC, and applies 40 reversible privacy and system tweaks, locking the managed ones in a configuration profile with System Integrity Protection left on.
- Reached #1 on Hacker News with 4,800+ GitHub stars and 57,000+ downloads, was covered by The Verge, Ars Technica, The Register, MacRumors and AppleInsider, and ships through Homebrew with attested GitHub Actions releases (github.com/omlahore/RemoveMacAI).

Open Source Contributions

61 merged pull requests across 24 open-source repositories, including four Cloud Native Computing Foundation (CNCF) projects (Kyverno, Volcano, OpenKruise and zot), Grafana and Google's Kubernetes History Inspector. All publicly verifiable.

- OneBusAway Maglev, a Go transit API server (github.com/OneBusAway/maglev, 10 merged): published merged real-time state as one atomic snapshot, keyed stop delays by stop sequence so loop trips keep both updates, bounded feed-manager shutdown with a context, and corrected 404 and 500 handling across endpoints.
- zot, a CNCF container registry (github.com/project-zot/zot, 9 merged): brought the registry in line with the Open Container Initiative (OCI) Distribution Specification, covering tag and repository pagination, an integer overflow on large page sizes, error codes for missing repositories and blobs, invalid tags on manifest push, and the upload Range header on streamed chunks.
- OneBusAway Wayfinder, a SvelteKit transit web app (github.com/OneBusAway/wayfinder, 7 merged): stopped outside-click dismissal from stealing keyboard focus, returned 400 for malformed analytics events, fixed a longitude span sent under the wrong parameter, and added unit tests.
- Grafana (github.com/grafana/grafana, 2 merged): fixed sparklines drawing flat for values below 1e-6, where the range minimum and maximum collapsed to the same float, and bounded the decimal count passed to toFixed in number formatting.
- Phase (github.com/phasehq/console/pull/972): fixed service-token expiry stored as server local time rather than Coordinated Universal Time (UTC), which shifted every token lifetime by the host offset.

Education

Vishwakarma Institute of Technology (VIT) Pune, India
Bachelor of Technology (B.Tech), Computer Science, CGPA 8.8/10 *November 2022 - June 2026*

Certifications: AWS Cloud Essentials, IBM DevOps, Cisco CCNA and Cybersecurity Essentials, Harvard CS50P.
