Om Lahore

Platform Engineer (DevOps and Infrastructure)

Mumbai, India | +91 91568 02668 | omlahorey@gmail.com | github.com/omlahore | linkedin.com/in/om-lahorey

Open to on-site or hybrid roles in Pune, Mumbai and Bengaluru, and remote.

Technical Skills

Infrastructure: Kubernetes, Docker, Amazon Web Services (AWS), Simple Storage Service (S3), Identity and Access Management (IAM), Route 53, Linux
CI/CD and automation: GitHub Actions, Continuous Integration and Continuous Deployment (CI/CD), container builds, release pipelines
Observability: Prometheus, Grafana, alerting on CPU, memory and error rates, incident response, root-cause forensics, postmortems
Languages: Go, TypeScript, JavaScript, Swift, Python, Bash, SQL
Backend: Node.js, Express, REST application programming interfaces (APIs), GraphQL, PostgreSQL, MongoDB, Redis
Security and access: Role-Based Access Control (RBAC), IAM policy design, TLS and certificate lifecycle, least privilege, secrets management

Experience

Founding Engineer June 2026 - Present
Ensueno *Mumbai, India*

- Run the deployment path for the platform as the founding engineer, from container build through release, across all 3 services.
- Build retrieval-augmented AI services on PostgreSQL with the pgvector extension, including a voice interface.

Web Developer April 2024 - June 2026
Marketing Mojito *Remote*

- Owned Amazon Web Services (AWS) infrastructure across 20 or more client properties: Simple Storage Service (S3) hosting, Domain Name System (DNS) records, Transport Layer Security (TLS) certificates, and per-client least-privilege Identity and Access Management (IAM) policies.
- Built Docker-based Continuous Integration and Continuous Deployment (CI/CD) pipelines on GitHub Actions for 20 or more properties.
- Instrumented Prometheus and Grafana alerting on central processing unit (CPU), memory and error rates across 20 or more client properties.
- First responder for production incidents including site compromises: contained and recovered the affected sites, ran the root-cause forensics, and wrote the postmortems.

Projects

RemoveMacAI | *Swift, SwiftUI, Objective-C, macOS*

- Built an open-source macOS debloater, a native SwiftUI app plus a command-line tool, that turns off Apple Intelligence, deletes its on-device models through Apple's asset service over XPC, and applies 40 reversible privacy and system tweaks, locking the managed ones in a configuration profile with System Integrity Protection left on.
- Reached #1 on Hacker News with 4,800+ GitHub stars and 57,000+ downloads, was covered by The Verge, Ars Technica, The Register, MacRumors and AppleInsider, and ships through Homebrew with attested GitHub Actions releases (github.com/omlahore/RemoveMacAI).

Open Source Contributions

61 merged pull requests across 24 open-source repositories, including four Cloud Native Computing Foundation (CNCF) projects (Kyverno, Volcano, OpenKruise and zot), Grafana and Google's Kubernetes History Inspector. All publicly verifiable.

- Volcano, a CNCF scheduler for batch and AI inference workloads (github.com/volcano-sh, 10 merged across kthena and volcano): fixed a data race on the router's datastore callbacks, stale grace-period state when marking a pod unavailable failed, deletion events keyed incorrectly for tombstoned objects, and CronJob conflict and status-update errors.
- zot, a CNCF container registry (github.com/project-zot/zot, 9 merged): brought the registry in line with the Open Container Initiative (OCI) Distribution Specification, covering tag and repository pagination, an integer overflow on large page sizes, error codes for missing repositories and blobs, invalid tags on manifest push, and the upload Range header on streamed chunks.
- Kyverno, a CNCF policy engine (github.com/kyverno/kyverno, 2 merged): fixed a panic where request.operation conditions ran an unchecked type assertion on non-string input, backported to release-1.19, and replaced a forked dependency with upstream rekor v1.5.4.
- OpenKruise, a CNCF project (github.com/openkruise/agents, 2 merged): replaced a string context key with an unexported key type to remove a cross-package collision risk, and fixed go vet and make build on master.
- OneBusAway Maglev, a Go transit API server (github.com/OneBusAway/maglev, 10 merged): published merged real-time state as one atomic snapshot, keyed stop delays by stop sequence so loop trips keep both updates, bounded feed-manager shutdown with a context, and corrected 404 and 500 handling across endpoints.

Education

Vishwakarma Institute of Technology (VIT) Pune, India
Bachelor of Technology (B.Tech), Computer Science, CGPA 8.8/10 *November 2022 - June 2026*

Certifications: AWS Cloud Essentials, IBM DevOps, Cisco CCNA and Cybersecurity Essentials, Harvard CS50P.
